## Industry wants more from EC than just awareness

[Christoph Hammerschmidt](#)

EE Times

09/30/2009 2:26 PM

MUNICH, Germany — The European semiconductor industry hails the EC announcement to foster [nanotechnology](#) and electronics. But the EC measures are not fast enough and not going far enough, some criticize.

In a joint press release, industry associations SEMI and EECA-ESIA welcomed the measures [announced by the EC](#) and highlighted the industry's willingness to play an active role in the implementation of the EC plans.

European nanoelectronics research [cluster](#) Catreane said it shares the EC position that micro- and nanoelectronics are of "systemic relevance" for Europe and announced "full support of the necessary strategies".

Infineon CEO Peter Bauer also praised the EC's new cognition. Of all semiconductor manufacturers, it was Infineon that during the financial crisis had lobbied at German state and federal governments and possibly also at the EC Commission level to recognize the semiconductor industry's 'systemic relevance' and hence to subsidize at least R&D efforts. 'Systemic relevance' — that was the government's buzzword describing the importance of banks bailed out when the financial crisis was at its climax less than a year ago.

With regard to the EC statements, Bauer pointed out that he is expecting a strategic European approach to industrial

## Around EE Times Europe

### Virtualization ready to fly

Virtualization, a concept of mainframe computing, is no longer restricted to business IT. Confronted with the requirement to integrate complex processing environments, embedded systems developers increasingly rely on virtualization techniques.

### Plenty of business in VDSL for Lantig

Christian Wolff, designated CEO of Infineon's wireline business sold to Golden Gate Capital, explains the company's strategies in terms of product spectrum, technologies and geographies.

### Datenmanagement - ein wichtiger Designaspekt

Die Verfügbarkeit relevanter Informationen zum richtigen Zeitpunkt ist ein entscheidender Faktor für den Erfolg jedes Designprojekts geworden. Entwickler sollten daher das Management der Designdaten beherrschen.

### "Chipfertigung in Europa ist unverzichtbar"

Inmitten der Krise hat die Landshut Silicon Foundry (LFoundry) ihre Tätigkeit aufgenommen. Lesen Sie, wie LFoundry-Chef Michael Lehnert in diesem Umfeld bestehen will.

innovation policy. At the same time he demanded concrete measures to make use of semiconductor technology in solving societal problems such as energy efficiency, combating global warming or ageing societies. In this context, he reiterated his call for a more equal playing field with the rest of the world.

**Podcasts**[Interview With Bruce Powell Douglass: What Is Agile?](#)

A similar statement came from SEMI Europe president Heinz Kundert who focused more on the manufacturing aspect. "The EC needs to ensure that the right framework conditions are in place also for manufacturing," he said with regard to the sagging [chip](#) production activities in Europe.

**POLL**

For those of you involved in embedded systems development: which of the following types of operating system are you planning to use in your next project?

- In-house developed OS
- Commercial proprietary
- Linux
- Android
- My project doesn't need an OS

[Visit The Poll Archives](#)

While those statements were diplomatic in tone, the industry also made clear that from its perspective the matter is rather urgent. And when looked into details, not all measures dangled by the EC were seen as positive. "The EC has established a [workgroup](#) related to our problems with a time line of one year. This is too long, we need concrete measures now," explained Martin Spaet, Director of the EECA-ESIA industry association.

While the EC move goes into the right direction, there is criticism in details. For [instance](#) the state regime defines a ceiling for R&D spending. "This is not helpful for the semiconductor industry where about 20 percent of annual revenues are spent for R&D", Spaet observed. "This threshold actually would cut research and development investments."

With regard to manufacturing, Spaet said the industry is aiming at a "differentiated view" with regard to subsidies. "Semiconductor manufacturing [in Europe] makes sense by any means," he said in an interview with *EE Times*. "But it needs to be differentiated. Not every chip vendor needs its own fab, but we need Europe to enable foundry business."
