

European Nanoelectronics Forum 2010 (former CATRENE / ENIAC Forum)

The third European Nanoelectronics Forum organised jointly by the EUREKA Cluster on nanoelectronics CATRENE and the ENIAC Joint Undertaking (JU)

took place this year on 16-17 November, in Madrid. The event attracted key players from industry, academia and public authorities and the topics of the forum included the integration process of public and private efforts to boost research in nanoelectronics, fields of innovation in Europe, the semiconductor market. ENIAC and CATRENE operate in different settings, but both share the same goal: strengthening the competitive position of the European electronics industry in the global playing field. The success of these two public private programmes is proven by the increase in funding for collaborative research on micro- and nanoelectronics in Europe.
